PERFORMANCE EVALUATION
An International Journal

# Subject Index

Accumulated reward 1
Achievable QoS 347
Algorithms 19
Alternate routing 41
Analytical modelling 209
ATM networks 41, 437
ATM switches 71, 89
Autocorrelated arrival process 367

Bandwidth 297
Bandwidth reservation 41
Buffer content 699
Buffer management 453

Cache 175
Call admission control in ATM 411
Concurrent I/O 453
Conflict misses 189
Congestion 297
Connection admission control 437

Data reuse 189
Database performance 175
Decomposability 159
Deterministic stochastic Petri nets 583
DFT 367
Diffusion queueing model 411
Discrete-time queueing system 367
Discrete-time queues 71
Distributed shared-memory multiprocessors 209
Distributed/parallel systems 273
Dynamic Time Division Duplexing (TDD) 331

Effective bandwidths 319, 673
End-to-end performance 297
Execution-driven simulation 209
Exponential bound 673

Failing nodes 647
Fault tolerant systems 491
FDDI (Fibre Distributed Data Interface) 391
Feedback 99
Fluid queue 699
Fuzzy Graph 473

Gang scheduling 273
Gaussian elimination 603
General state space Markov chains 565

Hessenberg matrix 603
Heterogeneous I/O 453
High-speed networks 507
Histogram 19

IEEE 802.4 Token Bus 391
Integrated services 347
Internet 297
IPv6 507
Iterative solution methods 583

Job characteristics 519
Joint queue-lengths distributions 99

LAN traffic 159
Large deviations 89, 673
Long-range dependence 699
Loss network with retrials 41
Loss probability 367

Markov chains 159, 583, 603, 627
Markov decision process 491
Markov fluid input 673
Markov regenerative processes 1
Markov regenerative stochastic Petri nets 583
Mass storage 231
Matrix-geometric solutions 273
MD5 507

Mean time to failure 627
Medium access control 391
Memory 253
Memory hierarchy 175
Metamodeling 473
Methodology 19
Multiclass input 673
Multiclass queues 147
Multiplexer 159
Multiprocessor 253, 519

Numerical analysis 117
Numerical methods 627
Numerical solution of Volterra integral equations 565
Numerical transient analysis of continuous-time Markov chains 565

Optimal stopping problem 491
Optimization 147
Output analysis 473

Packet-pair 297
Performance 519
Performance measurement 19
Performance modeling 231
Polling 647
Power-series algorithm 391
Preemptive 99
Prefetching 189
Priorities 99

Quality of service 319, 411
Queueing analysis 273
Queueing theory 89, 603
Queues with feedback 71
Queuing model 231

Random-order-of-service 71
Regular variation 699
Resource allocation 253
Revenue maximization 437
Robotic storage library 231
Round-robin 71

Scheduling 147, 253, 347, 519
Self-similar 159
Shared-memory 541
Simulation 473, 541
Single-server queue 99
Slotted ALOHA 331
SMP 367
Software data prefetching 209
Software rejuvenation 491
Stack depth processes 175
Star topology 331
Station breakdowns 647
Statistical bandwidth 411
Statistical multiplexing 673
Stochastic activity networks 583
Stochastic modeling 273
Stochastic Petri nets 565
Stochastic reward models 1

Tail distribution 673
Task completion time 1
Temporal caching 189
Tertiary storage 231, 453
TES 367
Threshold policies 147
Timed token protocol 391
Tools 19
Traffic characterization 319
Transient cumulative measures 117
Transient performance 117

Validation 541

Waiting time distribution 367
Wireless LANs and MAC protocol 331
Wireless networks 347
